Did Ancient Humans Actually Kiss?

Сценарий видео №4

Длительность ролика конкурента: 20:21 · Длительность нового сценария (по готовой озвучке): 25:00 · Слов: 3144 · Кадров (картинок): 578

1. Почему эта идея

- Тема «близость и романтика древних людей» в нише растёт: ролики «How Did Ancient Humans Flirt?», «…Find Love?» вышли за последние 1–5 месяцев. В исходном анализе канала идея «Why Do Humans Kiss?» получила 4,5 звезды: интимная тема трендит (13.1x у свежего ролика), универсальный вопрос.
- Похожие ролики уже есть: «When Did Ancient Humans Start Kissing?», «Why Do Humans Kiss? The Evolutionary Secret…», «How did Ancient Humans invent Kissing», классика Vsauce «Why Do We Kiss?». Почти все ведут с факта «поцелую 21 млн лет», после исследования Оксфорда (ноябрь 2025) этот крючок заезжен.
- Наш угол — «парадокс поцелуя»: предки обезьян, вероятно, целовались 17–21 млн лет назад, но романтический поцелуй зафиксирован меньше чем в половине из 168 изученных культур. Это объясняет, почему вопрос «целовались ли древние люди?» не такой простой, и даёт сильный хук.
- Важно: данные просмотров конкурентов в этот раз не удалось снять (лимит Nexlev). Перед публикацией 18.10 стоит проверить их цифры.

Название: «Did Ancient Humans Actually Kiss?». Запасные для A/B: «Kissing May Be 20 Million Years Old. So Why Didn't Everyone?», «How Ancient Humans Actually Learned to Kiss». Обложки: «EW. WHY?» (основная) и «BLAME THE APES».

2. Разбор сценария конкурента «How Ancient Humans Actually Created Dogs?» (20:21)

Таймкод	Блок	Что происходит / приём
0:00–0:41	Хук-погружение	«15 000 лет назад. Вы — охотник-собиратель…» Второе лицо, ритм-шутка «try not to die», ночь, шорох, жёлтые глаза — и неожиданный поворот: зверь не нападает
0:41–1:09	Тезис	«Всё было не так, как думают». Абсурдная картинка из современности (зверь спит на подушке и плачет, когда ты выходишь на 30 секунд)
1:09–1:45	Базовый факт	Собака — подвид серого волка; от чихуахуа до овчарки — все потомки волков
1:45–2:44	Когда?	Учёные спорят (15–40 тыс. лет); собаки — первые одомашненные, раньше лошадей и земледелия
2:44–3:39	Развенчание мифа	Романтическая версия «нашли волчат — вырастили» → «Completely not how it happened»; взрослого волка не приручить

3:39–5:41	Главный ответ	Волки одомашнили себя сами: мусор у стоянок, смелые особи получают еду, отбор по спокойствию
5:41–8:35	История учёного	Эксперимент Беляева с лисами + абсурдная деталь (генетика — «буржуазная лженаука»), синдром одомашнивания
8:35–10:17	Улица с двусторонним движением	Люди тоже изменились; одомашнивание происходило несколько раз в разных местах; ко-эволюция
10:17–12:38	Мозг и «хаки»	Указательный жест, взгляд и окситоцин, мышца «щенячьих глаз» → «Вы думали, что выбрали собаку. Это она 10 000 лет училась, чтобы вы её выбрали»
12:38–14:01	Эмоции	Совместные погребения людей и собак — дружба старше земледелия
14:01–16:21	Породы	Человек «взял руль»: работа, размеры, викторианские стандарты пород, юмор про бульдога-батон
16:21–17:49	Современность	Собаки в инстаграме, в завещаниях, носок интереснее всего на свете, корм за $40
17:49–19:46	Главный поворот	Собаки — участники собственного одомашнивания; «мы не просто создали собак — собаки помогли создать нас»
19:46–20:21	Финал-кольцо	Возврат к волку у костра; «в следующий раз, когда собака уснёт у вас на ногах…»

Приёмы, которые делают ролик вирусным

- Погружение во втором лице с первой секунды («It's 15,000 years ago. You're…») и визуальный клиффхэнгер (глаза в темноте).
- Обещание разрушить миф («it didn't happen the way most people think») и прямой разворот «Beautiful. Heartwarming. Completely not how it happened.»
- Перезагрузка внимания каждые 60–90 секунд: «Here's the thing», «Here's where it gets really interesting», «But here's the question nobody asks».
- Юмор через контраст древнее ↔ современное (подушка, носок, корм за $40) — каждые 2–3 минуты.
- Конкретные цифры и имена (15 000 лет, 1950-е, Беляев, levator anguli oculi medialis) создают ощущение достоверности.
- Мини-история с героем и абсурдной деталью в середине ролика (учёный, советская цензура).
- Переворот перспективы: «вы думали, что выбирали вы — на самом деле выбирали вас».
- Эмоциональный третий акт (погребения, любовь, горе) и финал-кольцо с обращением к питомцу зрителя.
- Короткие фразы, фрагменты, паузы — удобно ложится на смену картинок каждые 2–3 секунды.

Как приёмы конкурента перенесены в новый сценарий

Приём конкурента	В новом сценарии
Хук во 2-м лице, ночь, клиффхэнгер	45 000 лет назад, вы у костра в ледниковый период, кто-то садится слишком близко, наклоняется… и нюхает вашу щёку. «Это был поцелуй?»

Тезис + абсурд из современности	Kiss Cam на стадионе, «хохо» в сообщениях; «всё началось не так, как думают»
Базовый научный факт	Что вообще считается поцелуем: 4 правила учёных (дружелюбно, один вид, губы, никакой еды)
Когда? Учёные спорят	Оксфорд, 2025: общий предок человекообразных обезьян, ~17–21 млн лет назад; поцелуи не окаменевают
Развенчание мифа «Completely not how it happened»	Не «случайно изобрели» и не «Индия → Александр Македонский»: месопотамские таблички ~2500 до н. э., поцелуи у Гомера
Главный ответ	Три подозреваемых: последний «поцелуй» груминга, кормление изо рта в рот, обнюхивание
История учёного + абсурдная деталь	Лора Вейрих и 48 000-летний зубной камень неандертальца: микробы, тополь (природный аспирин) и пенициллиум
Улица с двусторонним движением	Парадокс: из 168 культур романтический поцелуй записан в 77 (46%); биология зарядила, культура переключила
Мозг и «хаки» + переворот перспективы	Губы, закрытые глаза, наклон головы вправо (2/3 пар), миф об «окситоциновом взрыве», поцелуй как проверка партнёра, 80 млн бактерий
Эмоции	Шимпанзе мирятся поцелуем (де Вааль), средневековый «поцелуй мира» — поцелуй значит «у нас всё хорошо»
Люди берут руль	Правила поцелуев Месопотамии и Персии; Рим: статуя Геркулеса, Катулл, запрет Тиберия
Современность	Викторианские дуэньи, фильм «The Kiss» 1896 года, Библия в суде, Голливудский кодекс, рекорд 58 часов
Главный поворот	Поцелуй разносит микробы, его пытались запрещать — но он выжил, потому что никогда не был «чем-то одним»; Приам у Гомера
Финал-кольцо	Снова у костра: «по правилам учёных — не совсем поцелуй», но смысл тот же — «ты наш»; обращение к зрителю

3. Разделение нового сценария на блоки

B01 0:00–0:42 • Хук: лицо у костра

Тема блока: Hook: The face by the fire

Основные смыслы: Погружение и парадокс с первых секунд.

Краткое содержание: 45 000 лет назад, вы у костра. Кто-то садится слишком близко, наклоняется и нюхает щёку. Обезьяны целовались ~20 млн лет назад, а романтический поцелуй записан меньше чем в половине культур.

B02 0:42–1:13 · Тезис: всё началось не так, как думают

Тема блока: Thesis: It didn't start the way people think

Основные смыслы: Вопрос названия и обещание ответа.

Краткое содержание: Kiss Cam и «хохо» — поцелуй кажется встроенным. Но обе вещи правдивы одновременно; к концу будет ясно почему.

B03 1:13–2:01 · Что вообще считается поцелуем

Тема блока: Base fact: What even counts as a kiss?

Основные смыслы: Научное определение.

Краткое содержание: Четыре правила команды учёных: дружелюбно, один вид, губы, без передачи еды. Собака не считается, муравьи тоже.

B04 2:01–3:23 · Когда? Оценка в 20 млн лет

Тема блока: When? The 20-million-year estimate

Основные смыслы: Возраст поцелуя и его ограничения.

Краткое содержание: Оксфорд, Матильда Бриндл: шимпанзе, бонобо, орангутаны целуются; модель указывает на общего предка 17–21 млн лет назад. Поцелуи не окаменевают. Шнобелевская премия 2026.

B05 3:23–4:33 · Миф: «поцелуй изобрели»

Тема блока: Myth-bust: Kissing was invented

Основные смыслы: Развенчание двух популярных версий.

Краткое содержание: Не случайное изобретение и не Индия → Александр. Месопотамские таблички ~4500 лет назад, поцелуи у Гомера; единой точки происхождения нет.

B06 4:33–5:46 · Ответ 1: последний поцелуй груминга

Тема блока: Main answer 1: The groomer's final kiss

Основные смыслы: Подозреваемый №1.

Краткое содержание: Адриано Ламейра (2024): поцелуй может быть остатком губного движения при груминге у обезьян.

B07 5:46–7:13 · Ответ 2–3: кормление и обнюхивание

Тема блока: Main answer 2-3: Kiss-feeding and the sniff

Основные смыслы: Подозреваемые №2 и №3.

Краткое содержание: Матери-обезьяны передают разжёванную еду (Эйбль-Эйбесфельдт, 1970); обнюхивание — египетское «sn», гавайское «honi».

B08 7:13–8:34 • История 1: зубной камень неандертальца

Тема блока: Mini-story 1: Laura Weyrich and the 48,000-year-old tartar

Основные смыслы: Мини-история с героем.

Краткое содержание: Лора Вейрих (2017) изучает 48 000-летний зубной камень: ДНК еды и микробов; споры о загрязнении.

B09 8:34–10:08 • История 2: неандерталец жуёт дерево

Тема блока: Mini-story 2: The tree-chewing Neanderthal and the microbe swap

Основные смыслы: Абсурдная деталь и улика.

Краткое содержание: Тополь (как аспирин) и пенициллиум у больного неандертальца; общий ротовой микроб — возможно, поцелуи, возможно, общая еда.

B10 10:08–11:40 • Парадокс: меньше половины из 168 культур

Тема блока: The paradox: Fewer than half of 168 cultures

Основные смыслы: Главный поворот сюжета.

Краткое содержание: Янковяк (2015): романтический поцелуй записан в 77 из 168 культур (46%); оговорки про неполноту записей.

B11 11:40–12:50 • Биология зарядила, культура переключила

Тема блока: Biology loaded it, culture flipped the switch

Основные смыслы: Почему оба факта правдивы.

Краткое содержание: Дарвин о «некиссующих» народах; хонги маори и куник инуитов — приветствия рядом с поцелуем, миф о «примерзающих губах».

B12 12:50–14:10 • Мозг 1: губы, закрытые глаза, наклон головы

Тема блока: Brain hacks 1: Lips, closed eyes, the head tilt

Основные смыслы: Что поцелуй делает с нами.

Краткое содержание: Губы и мозг; закрытые глаза; Гюнтюркюн: 2/3 пар наклоняют голову вправо; миф об окситоцине.

B13 14:10–15:42 • Мозг 2: поцелуй как проверка вблизи

Тема блока: Brain hacks 2: The kiss as a close-up check

Основные смыслы: Переворот перспективы.

Краткое содержание: Опыт с футболками (1995), опрос Оксфорда, 80 млн бактерий за 10-секундный поцелуй — поцелуй как проверка партнёра.

B14 15:42–16:59 • Эмоции: поцелуй примирения старше нас

Тема блока: Emotions: The make-up kiss is older than us

Основные смыслы: Поцелуй как «у нас всё хорошо».

Краткое содержание: Франс де Вааль: шимпанзе мирятся поцелуем; средневековый поцелуй мира; родительский поцелуй-обнюхивание.

B15 16:59–18:23 • Люди берут руль 1: первые правила

Тема блока: Humans take the wheel 1: The first kissing rules

Основные смыслы: Древние законы и обычаи.

Краткое содержание: Табличка из Сиппара, правила для пар и жриц, поцелуй земли перед ассирийским царём, персидская «лестница поцелуев» (Геродот).

B16 18:23–19:52 • Люди берут руль 2: Рим перебарщивает

Тема блока: Humans take the wheel 2: Rome overdoes it

Основные смыслы: Смешная история по порядку.

Краткое содержание: Цицерон и стёртый Геркулес, Катулл и «тысяча поцелуев», указ Тиберия, «подбородочная болезнь» у Плиния, Марциал.

B17 19:52–21:34 • Современность: микробы и камера

Тема блока: Modern day: The kiss meets germ science and the camera

Основные смыслы: От викторианцев до рекордов.

Краткое содержание: Дуэньи, «The Kiss» Эдисона 1896, закон 1909 о Библии в суде, статуя под простынёй 1914, Голливудский кодекс, рекорд 58 часов.

B18 21:34–22:45 • Поворот 1: эволюционная загадка

Тема блока: Main twist 1: The evolutionary conundrum

Основные смыслы: Зачем поцелуй, если он вреден?

Краткое содержание: Мононуклеоз, вирус герпеса губ, месопотамские «волдыри», просьба парламента 1439 года пропустить поцелуй королю.

B19 22:45–24:05 • Поворот 2: почему поцелуй выжил

Тема блока: Main twist 2 + emotional act: Why the kiss survived

Основные смыслы: Эмоциональная кульминация.

Краткое содержание: Поцелуй никогда не был чем-то одним; Приам целует руку Ахилла; мы, скорее всего, унаследовали поцелуй.

B20 24:05–25:00 · Финал: снова у костра

Тема блока: Ring ending: Back to the fire

Основные смыслы: Кольцо и обращение к зрителю.

Краткое содержание: Это не совсем поцелуй по правилам учёных, но значит то же: «ты наш». Обращение к зрителю: мама, ребёнок, партнёр, собака.

4. Полный сценарий с таймкодами (английский, для озвучки)

Таймкоды взяты из готовой озвучки (voiceover/voiceover.mp3). Каждая строка = одна картинка (кадр); номер в скобках совпадает с номером строки в image_prompts.txt.

B01 · 0:00 · Hook: The face by the fire

[0:00] It's forty-five thousand years ago.

[0:02] You're a hunter-gatherer by the fire.

[0:05] Someone sits down next to you.

[0:07] Way too close. And leans in.

[0:10] Things that don't exist yet: toothbrushes.

[0:13] Breath mints.

[0:15] Dentists.

[0:16] Closer. Then they stop, an inch away…

[0:19] and sniff your cheek.

[0:21] Wait. Was that a kiss?

[0:23] Because our ape ancestors were probably kissing around twenty million years ago.

[0:29] But when anthropologists checked one hundred sixty-eight cultures, romantic kissing wasn't even recorded in more than half of them.

[0:38] And what's that face by the fire about to do next?

B02 · 0:42 · Thesis: It didn't start the way people think

[0:42] So… did ancient humans actually kiss?

[0:46] Kissing feels pre-installed.

[0:48] At a ballgame, forty thousand strangers cheer as the Kiss Cam puts a heart around two fans.

[0:55] We sign texts 'xoxo.' But it didn't start the way people think.

[1:01] The ape kisses and the missing records?

[1:04] Both can be true.

[1:06] By the end, you'll know why, and why the kiss may have started as something far less romantic.

B03 • 1:13 • Base fact: What even counts as a kiss?

[1:13] First, a weird problem scientists had to solve.

[1:17] Before asking who kissed first, you need to know what counts.

[1:21] So one team of scientists wrote a working definition.

[1:25] Rule one: friendly.

[1:27] Fish that bump open mouths in a fight?

[1:30] Disqualified.

[1:32] Rule two: same species.

[1:34] Your dog licking your face? Doesn't count.

[1:37] The lead scientist reportedly joked this also rules out a capuchin monkey that once tried to kiss her.

[1:45] Rule three: mouth to mouth, with a little lip movement.

[1:49] Rule four: no food passed over.

[1:52] Ants handing each other snacks? Not a kiss.

[1:56] No fighting. Same species.

[1:58] Absolutely no snacks.

B04 • 2:01 • When? The 20-million-year estimate

[2:01] So when did the first kiss happen?

[2:04] In twenty twenty-five, that same team, led by Oxford's Matilda Brindle, collected every record they could find of which primates kiss.

[2:14] Chimpanzees: kissers. Bonobos: kissers. Orangutans: kissers.

[2:20] Gorillas: data patchy.

[2:22] The gorillas declined to comment.

[2:25] They mapped the kissers onto the primate family tree and ran over ten million simulations, working backwards.

[2:33] Answer: kissing probably goes back to the shared ancestor of the great apes, somewhere between about seventeen and twenty-one million years ago.

[2:43] No humans yet.

[2:45] Your first kiss felt awkward?

[2:47] The first one may have been two hairy apes in a tree.

[2:51] Nobody filmed that one either.

[2:53] Big caveat: kisses don't fossilize.

[2:57] This is a statistical estimate on thin data, much of it from captive animals.

[3:03] And it tells us when, not why.

[3:05] Fun bonus: in twenty twenty-six, that team won an Ig Nobel Prize, for research that first makes people laugh, then makes them think.

[3:16] Brindle calls kissing an evolutionary conundrum.

[3:20] Hold on to that 'why.'

B05 • 3:23 • Myth-bust: Kissing was invented

[3:23] You've probably heard the story of how kissing was invented.

[3:27] The movie version: two cave people, one magical accident, the first kiss ever, and it spreads worldwide.

[3:35] The popular version: kissing was invented in ancient India, and Alexander the Great's soldiers carried it west to Europe around three twenty-six BCE.

[3:47] Beautiful. Romantic.

[3:50] Completely not how it happened.

[3:52] One: clay tablets from Mesopotamia mention kissing about four thousand five hundred years ago, roughly a thousand years before those Indian texts.

[4:04] Two: in Homer's poems, Greeks were already kissing centuries before Alexander was born.

[4:11] Alexander conquered half the known world, but kissing is one conquest historians won't give him.

[4:18] And the tablet experts say kissing probably arose in many places, long before anyone wrote it down.

[4:26] Mesopotamia didn't invent the kiss.

[4:29] It just left the oldest paperwork.

B06 • 4:33 • Main answer 1: The groomer's final kiss

[4:33] So if nobody invented it...

[4:35] where did it come from?

[4:37] Scientists have several suspects.

[4:39] Three are big ones.

[4:41] None is proven, and they argue about all three.

[4:45] Suspect number one: grooming.

[4:48] Apes spend hours cleaning each other.

[4:50] In twenty twenty-four, Adriano Lameira at the University of Warwick pointed to how grooming often ends.

[4:59] The groomer pushes out its lips and gently slurps up one last bit of dirt or a tiny bug.

[5:06] He calls it the 'groomer's final kiss.' His idea: as our ancestors lost their fur, there was less to clean, but the lip move stuck around as a sign of trust.

[5:18] So that big romantic movie kiss may be the great-great-great, times a million, grandchild of an ape picking bugs off its best friend.

[5:29] Greeting card companies, please don't use this.

[5:32] It could have gone very differently.

[5:35] Some capuchin monkeys in Costa Rica test friendships by gently poking fingers into each other's eyes.

[5:43] Be grateful evolution picked lips.

B07 • 5:46 • Main answer 2-3: Kiss-feeding and the sniff

[5:46] Suspect number two is... a little gross.

[5:50] Kiss-feeding. Orangutan and chimp mothers sometimes chew food and pass it straight into their baby's mouth.

[5:58] Before baby food aisles with forty flavors, there was exactly one flavor: whatever Mom just chewed.

[6:06] In nineteen seventy, an Austrian ethologist suggested that's where the kiss began.

[6:12] Humans do it too: one survey found pre-chewing food mentioned in thirty-eight of one hundred nineteen cultures, most often for feeding babies.

[6:23] But Lameira notes a kiss pulls inward, while feeding pushes outward.

[6:28] And the Oxford definition deliberately leaves food out, so the two can't be mixed up.

[6:35] Suspect number three: the sniff.

[6:37] Anthropologist Vaughn Bryant thought early humans may have recognized each other by smell, up close.

[6:45] Clues: the ancient Egyptian word for kiss, 'sn,' also meant 'to smell,' and was written with a little nose sign.

[6:54] In Hawaiian, 'honi' means smell, sniff or kiss.

[6:57] And those old Indian texts?

[7:00] Some scholars say their 'kisses' read more like sniffing.

[7:04] Keep that sniff in mind.

[7:06] And we still haven't reached the one hundred sixty-eight cultures.

[7:10] That's the weird part.

B08 • 7:13 • Mini-story 1: Laura Weyrich and the 48,000-year-old tartar

[7:13] But first, a question nobody asks: what about the other humans?

[7:18] Forty-five thousand years ago, our species wasn't alone.

[7:22] Neanderthals were around too, and the two groups met.

[7:26] Did Neanderthals ever kiss?

[7:29] Remember: kisses don't fossilize.

[7:32] No bones. No footprints. No selfie.

[7:35] In twenty seventeen, researcher Laura Weyrich and her team went after the least romantic evidence in archaeology: tartar.

[7:45] Hardened plaque on Neanderthal teeth from caves in Spain and Belgium.

[7:51] Old plaque is a time capsule.

[7:53] It traps DNA from food and from mouth microbes.

[7:57] The catch: ancient DNA is easy to contaminate, and other scientists later questioned how far plaque DNA can be trusted.

[8:07] Still, from one Neanderthal in El Sidron cave, the team rebuilt almost the whole genome of a mouth microbe whose name is a mouthful.

[8:18] About forty-eight thousand years old: a record at the time.

[8:22] Next time your dentist scrapes your teeth, they're throwing away future history.

[8:28] And someone in that cave had a toothache.

[8:31] Wait until you hear what he chewed.

B09 · 8:34 · Mini-story 2: The tree-chewing Neanderthal and the microbe swap

[8:34] So, what did he chew? The menu first.

[8:37] In Belgium: woolly rhino and wild sheep.

[8:41] In Spain, no trace of meat showed up in the plaque.

[8:45] Instead: mushrooms, pine nuts... and moss.

[8:48] And the young Neanderthal with the toothache?

[8:51] His plaque held DNA from poplar, a tree whose bark contains a chemical related to aspirin, plus Penicillium mold.

[9:01] Modern you: toothache, take an aspirin.

[9:04] Neanderthal you: toothache, go chew a tree.

[9:08] He may have been treating himself. Maybe.

[9:11] Now the kissing clue.

[9:13] The Neanderthal strain of that microbe split from the human strain more than a hundred thousand years ago, which the team suggested could mean it passed between the groups.

[9:25] Weyrich suggested they may have been kissing.

[9:29] Or just sharing food. Nobody knows.

[9:32] That's far older than the big meeting about forty-seven thousand years ago, so any swap would have come from an earlier encounter.

[9:41] What we do know: our species and Neanderthals had children together, mostly around that big meeting.

[9:49] That's why most people outside Africa carry about two percent Neanderthal DNA.

[9:56] And the Oxford team says that if apes kiss, Neanderthals likely did too.

[10:02] So that face by the fire?

[10:04] Maybe, just maybe, it wasn't even your species.

B10 · 10:08 · The paradox: Fewer than half of 168 cultures

[10:08] Okay. Apes kiss. Neanderthals probably kissed.

[10:13] Case closed, right? Not even close.

[10:16] In twenty fifteen, anthropologist William Jankowiak and two colleagues combed through records of one hundred sixty-eight cultures.

[10:26] One question: does this culture do romantic kissing on the lips?

[10:31] It was recorded in seventy-seven of them.

[10:35] About forty-six percent. Fewer than half.

[10:38] It showed up in all ten Middle Eastern cultures they sampled, and most Asian and European ones.

[10:46] But no ethnographer reported it among the Sub-Saharan African, New Guinean or Amazonian forager groups they studied.

[10:56] Two caveats. 'Not recorded' isn't 'never happened': kissing is private, and one Oxford expert suspects the real number is higher.

[11:06] And this is only romantic kissing, not parents kissing babies.

[11:11] And it's not 'primitive.' Just a different way of showing love.

[11:16] Hollywood says every love story ends with a kiss.

[11:20] Hollywood never asked the rest of the world.

[11:23] One early nineteen-hundreds account says when some villagers in southern Africa first saw Europeans kissing, their reported verdict was: 'They eat each other's saliva and dirt!' From the outside... fair point.

B11 • 11:40 • Biology loaded it, culture flipped the switch

[11:40] So how can both be true?

[11:42] Even Charles Darwin noticed the gap.

[11:45] In eighteen seventy-two, going on travelers' reports, he wrote that some peoples didn't kiss and touched noses instead.

[11:54] Those reports got plenty wrong.

[11:56] But face-to-face greetings aren't a replacement for kissing.

[12:01] They live right alongside it.

[12:03] The Maori hongi: pressing noses and foreheads together.

[12:08] It's a greeting, and Maori kiss too.

[12:10] And the Inuit kunik.

[12:12] Quick myth-bust: it's NOT rubbing noses so your lips don't freeze together at minus forty.

[12:19] A kunik means pressing your nose and upper lip to a loved one's cheek or forehead and breathing in, mostly with family and little kids.

[12:29] Basically a cuddle with a sniff.

[12:32] And yes, Inuit kiss on the lips too.

[12:35] One way to see it: evolution handed us a toolkit.

[12:39] Lips, the grooming move, the sniff.

[12:41] Culture decided which tool to grab.

[12:44] Biology loaded the habit.

[12:47] Culture flipped the switch.

B12 • 12:50 • Brain hacks 1: Lips, closed eyes, the head tilt

[12:50] So what does a kiss actually do to you?

[12:53] Start with the lips.

[12:54] They're packed with nerve endings and get a surprisingly big slice of your brain's touch map.

[13:01] Built by brain space, you'd basically be a cartoon.

[13:05] Which, on this channel... checks out.

[13:08] Why close your eyes?

[13:10] One idea: busy eyes leave less attention for touch.

[13:15] Eyes open is like streaming a movie while downloading a giant game update.

[13:21] Nobody's tested that on a kiss, though.

[13:24] The head tilt: in two thousand three, biopsychologist Onur Gunturkun counted one hundred twenty-four kissing couples in public places in three countries.

[13:36] About two out of three tilted right, which he suspects goes back to how babies turn their heads.

[13:44] Strangers' first kisses split closer to fifty-fifty.

[13:48] And the famous 'love hormone flood'?

[13:50] The small study usually cited found oxytocin went up in men and DOWN in women.

[13:57] It was only a conference talk, never fully published, and many scientists think the 'love hormone' nickname is oversold.

[14:06] Better PR agent than evidence.

B13 • 14:10 • Brain hacks 2: The kiss as a close-up check

[14:10] Up close, a kiss may also be an inspection.

[14:13] In a famous nineteen ninety-five experiment, forty-nine women sniffed T-shirts that men had worn for two nights.

[14:22] Peak romance.

[14:24] Women generally preferred the smell of men whose immune genes differed from their own.

[14:30] Later results are mixed, and it didn't test kissing, but your nose may notice things.

[14:36] An Oxford survey of nine hundred plus adults suggests people use kissing to help size up a new partner, and couples who kiss more tend to say they're happier.

[14:48] In one small experiment with fifty-two people, those asked to kiss their partners more for six weeks ended up less stressed and more satisfied.

[14:58] Then the microbes.

[15:00] Dutch scientists studied twenty-one couples and estimated that one long ten-second kiss on the lips can pass around eighty million bacteria.

[15:11] Mostly harmless.

[15:13] Bonus: in seventy-four percent of couples, the man reported kissing more often than his partner did.

[15:21] Somebody's rounding up.

[15:23] So a kiss is a close-up: smell, taste, millions of swapped bacteria.

[15:29] Some scientists think that close-up works like a tiny check on the other person.

[15:34] So here's the flip: you think you're just kissing someone.

[15:38] Your body may think it's running a background check.

B14 • 15:42 • Emotions: The make-up kiss is older than us

[15:42] Nineteen seventy-nine.

[15:44] A zoo in the Netherlands.

[15:46] That year, Frans de Waal and a colleague published their observations of the chimps at Arnhem's Burgers' Zoo.

[15:55] Soon after a fight, former opponents often sought each other out, and the classic make-up move was a kiss.

[16:03] De Waal later wrote that the opponents are 'attracted to each other like magnets.' They gave it a name: reconciliation.

[16:11] Chimps: fight, kiss, done.

[16:13] Humans: fight, three days of silence, then a text that just says 'k'.

[16:18] So one of a kiss's oldest jobs may not be 'I love you.' It may be 'we're okay.' Humans kept that job.

[16:27] Medieval enemies often ended feuds with a formal kiss of peace.

[16:32] In Dutch, one everyday word for kiss, 'zoen', first meant making peace after a feud, probably thanks to that kiss of peace.

[16:42] You can still hear it in 'verzoening': reconciliation.

[16:46] A whole language remembers.

[16:48] And sometimes it's simply tender.

[16:51] In ancient India, a loving 'kiss' could mean breathing in the scent of a child's head.

[16:56] Lots of parents still do.

B15 • 16:59 • Humans take the wheel 1: The first kissing rules

[16:59] And once humans started writing things down...

[17:02] they started making rules.

[17:05] Remember those Mesopotamian clay tablets?

[17:08] They show kissing as a normal part of romance, family and friendship.

[17:14] A tablet from the city of Sippar, nearly four thousand years old, describes a lover's embrace and kiss.

[17:22] The original love text: pressed into wet clay, then left in the sun to dry.

[17:28] And the rules?

[17:29] Married couples: fine.

[17:31] Unmarried couples: a dangerous temptation.

[17:35] And one belief warned: kiss a certain kind of priestess who was strictly off-limits, and you'd lose the ability to speak.

[17:44] An ancient do-not-touch sign, and the penalty was being muted.

[17:49] Later, before an Assyrian king, you kissed the ground.

[17:53] In Persia, said the Greek historian Herodotus, equals kissed on the lips.

[17:58] Slightly lower: the cheek.

[18:01] Much lower: bow to the floor.

[18:03] Imagine guessing your rank wrong at a party.

[18:06] And in Egypt, Herodotus claimed, nobody would kiss a Greek on the mouth, because Greeks killed and ate cows, and Egyptians held cows sacred to the goddess Isis.

[18:19] It's not you.

[18:21] It's your dinner.

B16 • 18:23 • Humans take the wheel 2: Rome overdoes it

[18:23] Then came the Romans.

[18:25] And the Romans... overdid it.

[18:27] In seventy BCE, Cicero described a bronze Hercules in Sicily with its mouth and chin slightly worn by kisses.

[18:37] That's not devotion.

[18:39] That's erosion.

[18:41] Around sixty BCE, the poet Catullus begged for 'a thousand kisses, then a hundred,' then planned to scramble the count so no jealous neighbor could jinx them.

[18:54] History's first guy hiding his stats from the haters.

[18:58] Then Emperor Tiberius, who ruled from fourteen to thirty-seven CE, issued an edict banning everyday kissing.

[19:07] Why? The sources don't say.

[19:09] Decades later, a Roman writer described a nasty 'chin disease,' mentagra, that spread through Rome's upper class around then, passed along by greeting kisses.

[19:22] Some modern historians connect the two.

[19:25] No ancient writer does.

[19:27] Ancient Rome: an emperor's kissing ban.

[19:30] Modern version: the office email about not sharing mugs during flu season.

[19:36] Did it work?

[19:38] About sixty years after Tiberius died, the poet Martial was still complaining there was 'no escaping the kissers' in Rome.

[19:47] People kissed you hello even with a fever.

[19:50] So: no.

B17 • 19:52 • Modern day: The kiss meets germ science and the camera

[19:52] Fast forward.

[19:54] The kiss meets two new enemies: germs and cameras.

[19:58] Victorian times: public kissing was considered vulgar, and courting couples had a chaperone watching.

[20:06] Eighteen ninety-six.

[20:08] Edison's studio films 'The Kiss.' About eighteen seconds of two actors re-creating a stage musical's final kiss.

[20:17] One critic called it 'absolutely disgusting,' and there were calls for censorship.

[20:23] Some historians think Edison's own publicity fed the scandal.

[20:28] Today it'd be a toothpaste ad.

[20:30] Meanwhile, English courts, for centuries, had witness after witness kiss the same Bible.

[20:37] Then, amid germ worries, a nineteen oh-nine law made the raised-hand version standard: no kiss, just hold the Bible up and swear.

[20:48] Nineteen fourteen.

[20:50] Some people in an English town found a marble statue of a kiss so scandalous it got draped with a sheet.

[20:58] A statue had to wear a blanket.

[21:00] Hollywood's own rules banned 'excessive' kisses for decades.

[21:05] So in nineteen forty-six's Notorious, Alfred Hitchcock filmed a kiss scene of about two and a half minutes, chopped into little kisses with pauses between.

[21:17] In twenty thirteen, a Thai couple kissed for fifty-eight hours, thirty-five minutes and fifty-eight seconds.

[21:25] Then the record book retired the category for safety.

[21:29] The Romans kissed to say hello.

[21:32] These two kissed for a prize.

B18 • 21:34 • Main twist 1: The evolutionary conundrum

[21:34] One question still bugs scientists.

[21:37] Remember Brindle's 'evolutionary conundrum'?

[21:41] Kissing can spread germs with no obvious survival payoff.

[21:45] Mono is nicknamed 'the kissing disease' because its virus spreads through saliva.

[21:51] But you can also catch that virus from a shared bottle or spoon, and many people pick it up as kids, usually without getting sick.

[22:01] About two-thirds of people under fifty carry the cold-sore virus, usually picked up in childhood, often from a family kiss.

[22:11] Ancient Mesopotamian doctors described a blistery mouth illness some researchers compare to cold sores.

[22:19] Their explanation?

[22:21] Gods and demons.

[22:23] In fourteen thirty-nine, with disease spreading, England's Parliament politely asked King Henry the Sixth if people could skip the kiss in the loyalty ceremony.

[22:35] Not a ban.

[22:36] Translation: 'can we just wave?' Germs. Scandals. An emperor's ban.

[22:41] The kiss survived it all.

[22:43] So why?

B19 • 22:45 • Main twist 2 + emotional act: Why the kiss survived

[22:45] Science's best guess right now is surprisingly simple.

[22:50] Maybe the kiss survived because it was never just one thing.

[22:54] It may have started as 'I trust you,' 'I'll feed you' or 'you smell like family.' Chimps use it to say 'we're okay.' Many people use it to ask 'are we a good match?' A kiss can also speak when words aren't enough.

[23:10] Nearly three thousand years ago, in Homer's Iliad, a grieving king, Priam, kneels before Achilles, the warrior who killed his son, and kisses his hands to beg for his son's body.

[23:24] Not romance.

[23:26] Not germs.

[23:28] Just a father who lost his son.

[23:30] So we probably didn't invent the kiss.

[23:33] Most likely, we inherited it from that hairy ancestor in a tree.

[23:38] Then we did what no ape ever did: wrote it on clay, ranked it, banned it, filmed it, and made it say 'I love you,' 'welcome home' and 'goodbye.' Maybe that's the real twist.

[23:51] We think we're the ones who kept the kiss alive.

[23:54] Maybe it's the other way around: the kiss helped keep us together.

[23:59] Babies fed.

[24:01] Fights patched up.

[24:02] Strangers turned into family.

B20 • 24:05 • Ring ending: Back to the fire

[24:05] So let's go back to that fire.

[24:08] Forty-five thousand years ago.

[24:10] Still no toothbrushes.

[24:12] That face, an inch from yours, sniffing your cheek.

[24:16] Was it a kiss?

[24:18] By the rulebook…

[24:19] not quite.

[24:21] But some scientists think a sniff like that is how the kiss began.

[24:26] And if they lean in again?

[24:28] Maybe a kiss, a habit probably twenty million years old.

[24:32] Or they just pick a bug out of your hair.

[24:35] Either way, it probably means: you're one of us.

[24:39] So next time you kiss someone goodnight, your mom, your kid, your partner, even your dog, which, by that rulebook, doesn't count, remember: you're doing something older than writing, and probably older than our species.

[24:55] One of the oldest ways there is to say: we're okay.

5. Факты, которые стоит перепроверить перед публикацией

- Происхождение поцелуя: Brindle, Talbot & West, Evolution and Human Behavior, 19.11.2025 (оценка ~21,5–16,9 млн лет, байесовская модель на скудных данных). Шнобелевская премия 2026 подтверждена страницами Improbable Research / Оксфорда (проверено фактчекером), но перед публикацией стоит ещё раз открыть improbable.com.
- Неандертальцы: Weyrich et al., Nature 2017 (зубной камень El Sidrón, Methanobrevibacter oralis, тополь, пенициллиум) — «поцелуй» лишь одна из версий; доля неандертальской ДНК ~2% (Sümer 2024, Iasi 2024).

- Культуры: Jankowiak, Volsche & Garcia, American Anthropologist 2015 — 77 из 168 культур (46%), «recorded», а не «practiced».
- Месопотамия: Arbøll & Rasmussen, Science 2023 (~2500 до н. э.); парафраз таблички из Сиппара — сверить с переводом Wasserman.
- Наклон головы: Güntürkün, Nature 2003 (80 из 124 пар). Бактерии: Kort et al., Microbiome 2014 (оценка 80 млн за 10-секундный поцелуй, 21 пара).
- Шимпанзе: de Waal & van Roosmalen 1979 (зоопарк Бюргерс, Арнем). Голландское «zoen» — сверить этимологию.
- Рим: Цицерон, In Verrem 2.4.94; Катулл 5; Светоний, Тиберий 34; Плиний о mentagra; Марциал. Связь указа Тиберия с mentagra — версия историков, не источников.
- Англия 1439 — просьба пропустить ритуальный поцелуй королю, не запрет поцелуев. Закон 1909 (Oaths Act) — сверить формулировку. Фильм «The Kiss» 1896 — ~18 секунд (источники 15–26 с).

6. Производство

- Озвучка: voiceover/voiceover.mp3 (Kokoro TTS, am_michael, скорость 0.85, удлинённые паузы).
- Промпты: image_prompts_stickly.txt (стиль Stickly) и image_prompts.txt (Paint) — по одному на кадр.
- Видео: final_video_1080p.mp4 — кадры нарисованы программно (новая версия рисовалки с отдельными эмоциями персонажей и сценой поцелуя).
