

How Ancient Humans Actually Discovered Alcohol?

Сценарий видео №2 для канала в нише Explain In Paint

Длительность ролика конкурента: 20:21 · Длительность нового сценария (по готовой озвучке): 21:55 · Слов: 3254 · Кадров (картинок): 553

1. Почему эта идея

- На канале Explain In Paint «When Did Ancient Humans Start Taking Drugs?» — 409К (7.6х к среднему): тема «запретных удовольствий» древних людей — второй по силе кластер после животных.
- Прямой спрос на алкоголь: «When Did Ancient Humans Start Drinking Alcohol?» (Ink Explainer) — 894К за 4 мес., ролик партнёрского канала сети (та же ссылка на курс) — 262К за 4 мес., TED-Ed — 7.6 млн.
- Конкуренция: много свежих роликов-клонов с 10–400 просмотрами — они короткие (4–12 мин) и без истории. Длинный (20+ мин) сценарий с сюжетом и юмором выигрывает по удержанию.
- Отвергнутые варианты: «When Did Ancient Humans Start Kissing?» и «...Toothache?» — десятки свежих клонов, ни одного ролика выше 90К, спрос слабее.
- Угол, которого нет у конкурентов: «мы не изобрели алкоголь — мы унаследовали вкус к нему от обезьян 10 млн лет назад», плюс главный поворот «пиво могло построить цивилизацию».

Название: «How Ancient Humans Actually Discovered Alcohol?» (формула хита про собак: How + Ancient Humans + Actually). **Превью:** «WHO GOT DRUNK FIRST?»

2. Разбор сценария конкурента «How Ancient Humans Actually Created Dogs?» (20:21)

Таймкод	Блок	Что происходит / приём
0:00–0:41	Хук-погружение	«15 000 лет назад. Вы — охотник-собиратель...» Второе лицо, ритм-шутка «try not to die», ночь, шорох, жёлтые глаза — и неожиданный поворот: зверь не нападает
0:41–1:09	Тезис	«Всё было не так, как думают». Абсурдная картинка из современности (зверь спит на подушке и плачет, когда ты выходишь на 30 секунд)
1:09–1:45	Базовый факт	Собака — подвид серого волка; от чихуахуа до овчарки — все потомки волков
1:45–2:44	Когда?	Учёные спорят (15–40 тыс. лет); собаки — первые одомашненные, раньше лошадей и земледелия
2:44–3:39	Развенчание мифа	Романтическая версия «нашли волчат — вырастили» → «Completely not how it happened»; взрослого волка не приручить
3:39–5:41	Главный ответ	Волки одомашнили себя сами: мусор у стоянок, смелые особи

		получают еду, отбор по спокойствию
5:41–8:35	История учёного	Эксперимент Беляева с лисами + абсурдная деталь (генетика — «буржуазная лженаука»), синдром одомашнивания
8:35–10:17	Улица с двусторонним движением	Люди тоже изменились; одомашнивание происходило несколько раз в разных местах; ко-эволюция
10:17–12:38	Мозг и «хаки»	Указательный жест, взгляд и окситоцин, мышца «щенячьих глаз» → «Вы думали, что выбрали собаку. Это она 10 000 лет училась, чтобы вы её выбрали»
12:38–14:01	Эмоции	Совместные погребения людей и собак — дружба старше земледелия
14:01–16:21	Породы	Человек «взял руль»: работа, размеры, викторианские стандарты пород, юмор про бульдога-батон
16:21–17:49	Современность	Собаки в инстаграме, в завещаниях, носок интереснее всего на свете, корм за \$40
17:49–19:46	Главный поворот	Собаки — участники собственного одомашнивания; «мы не просто создали собак — собаки помогли создать нас»
19:46–20:21	Финал-кольцо	Возврат к волку у костра; «в следующий раз, когда собака уснёт у вас на ногах...»

Приёмы, которые делают ролик вирусным

- Погружение во втором лице с первой секунды («It's 15,000 years ago. You're...») и визуальный клиффхэнгер (глаза в темноте).
- Обещание разрушить миф («it didn't happen the way most people think») и прямой разворот «Beautiful. Heartwarming. Completely not how it happened.»
- Перезагрузка внимания каждые 60–90 секунд: «Here's the thing», «Here's where it gets really interesting», «But here's the question nobody asks».
- Юмор через контраст древнее ↔ современное (подушка, носок, корм за \$40) — каждые 2–3 минуты.
- Конкретные цифры и имена (15 000 лет, 1950-е, Беляев, levator anguli oculi medialis) создают ощущение достоверности.
- Мини-история с героем и абсурдной деталью в середине ролика (учёный, советская цензура).
- Переворот перспективы: «вы думали, что выбирали вы — на самом деле выбирали вас».
- Эмоциональный третий акт (погребения, любовь, горе) и финал-кольцо с обращением к питомцу зрителя.
- Короткие фразы, фрагменты, паузы — удобно ложится на смену картинок каждые 2–3 секунды.

Как приёмы конкурента перенесены в новый сценарий

Приём конкурента	В новом сценарии
Хук во 2-м лице: 15 000 лет назад, глаза в темноте	13 000 лет назад, пещера Ракефет: забыл зерно в воде, через неделю оно бурлит — «Поздравляю, вы только что напились»
Абсурдная картинка в тезисе	Надоедливый кузен вдруг стал самым смешным

	человеком на свете
«Не так, как все думают»	Мы не изобрели алкоголь — мы унаследовали вкус к нему от обезьян
Базовый научный факт	Гипотеза «пьяной обезьяны», мутация ADH4 (в 40 раз лучше расщепляет алкоголь)
Когда? учёные спорят	Ракефет (13 000 лет), Гёбекли-Тепе, Цзяху (9 000 лет), вино Грузии (8 000 лет)
Миф: сначала земледелие	Миф «сначала хлеб, потом пиво» → возможно, пиво было раньше хлеба
История учёного с абсурдной деталью	Шумерские соломинки из золота, закон Хаммурапи «утопить продавщицу пива», миф о пьяной богине Сехмет
Мозг и «хаки»	Дофамин, эндорфины, «социальный клей», похмелье, ген «азиатского покраснения»
Эмоциональный блок	Первое пиво — на похоронах; люди передают чашу у костра
Юмор современности	Котабос = древний бир-понг, «плевательное пиво», 400 пьяных кроликов ацтеков, яйца совы от похмелья
Развенчание мифов	«В Средневековье пили пиво из-за грязной воды», «чокаются, чтобы проверить яд», «пьяные слоны»
Главный поворот	Земледелие могло начаться ради пива; биология не успела за дистиллятами
Финал-кольцо	Возврат в пещеру, первый тост, «10-миллионлетняя история, начавшаяся с обезьяны и гнилого фрукта»

3. Разделение нового сценария на блоки

B01 0:00–0:50 • Хук: бурлящая каменная чаша

Тема блока: Hook: the bubbling stone bowl

Основные смыслы: Погружение: зритель сам случайно делает первое пиво.

Краткое содержание: 13 000 лет назад в пещере на территории Израиля вы замочили дикое зерно и забыли на неделю. Оно бурлит и воняет, но вы голодны и пьёте. Становится тепло и весело, кузен кажется смешным. Вы напились — и вы точно не первый.

B02 0:50–1:33 • Тезис и три вопроса

Тема блока: Thesis: older than writing, cities and farming

Основные смыслы: Алкоголь старше письменности, городов и земледелия; мы унаследовали вкус к нему.

Краткое содержание: Обещание: почему мы любим алкоголь, когда начали делать его специально и построило ли пиво цивилизацию. Призыв досмотреть до конца.

V03 1:33–3:55 • Пьяная обезьяна

Тема блока: The drunken monkey

Основные смыслы: Любовь к алкоголю старше нашего вида.

Краткое содержание: Перебродившие фрукты в джунглях, мутация ADH4 10 млн лет назад, гипотеза «пьяной обезьяны». Шимпанзе пьют пальмовое вино листьями-губками, отвергнутые мушки пьют чаще, тупайя пьёт нектар и не пьянеет, миф о пьяных слонах.

V04 3:55–5:05 • Пиво раньше хлеба: пещера Ракефет

Тема блока: Beer before bread: Raqefet Cave

Основные смыслы: Первое известное пиво — 13 000 лет, до земледелия, возможно для похорон.

Краткое содержание: Исследование 2018 года: следы солода в каменных ступах натуфийцев. Пещера была кладбищем с могилами на цветах — первое пиво могло быть поминальным.

V05 5:05–6:19 • Гёбекли-Тепе

Тема блока: Göbekli Tepe: the world's first party temple?

Основные смыслы: Пиршества и, возможно, пиво объединяли сотни людей.

Краткое содержание: Храм 11 500 лет, построенный охотниками-собираателями: 10-тонные столбы, резьба, гигантские каменные чаны, кости пиров. Гипотеза о пивоварении — спорная, но логичная.

V06 6:19–7:18 • Китай: самый древний доказанный напиток

Тема блока: China: the oldest drink we can actually prove

Основные смыслы: Химически подтверждённый напиток 9 000 лет.

Краткое содержание: Цзяху: рис, мёд и боярышник/виноград; там же костяные флейты. Современная пивоварня воссоздала рецепт.

V07 7:18–8:22 • Вино

Тема блока: Wine: grapes, jars and pine resin

Основные смыслы: От топтания ногами до винтажа фараона.

Краткое содержание: Грузия 8 000 лет, Иран 7 000 лет со смолой, винодельня в армянской пещере 6 000 лет, подписанные винные кувшины Тутанхамона.

V08 8:22–10:08 • Шумер: зарплата пивом и соломинки

Тема блока: Sumer: paid in beer, drinking through straws

Основные смыслы: Пиво как еда, деньги и религия.

Краткое содержание: Пайки пивом, густое пиво с шелухой, длинные соломинки, золотая соломинка из Ура, Энкиду становится человеком через хлеб и пиво, гимн Нинкаси, закон Хаммурапи о тавернах.

B09 10:08–11:47 • Египет: пиво строителей пирамид и пьяная богиня

Тема блока: Egypt: beer for the pyramid builders and a drunk goddess

Основные смыслы: Пиво — жидкий хлеб и спасение человечества.

Краткое содержание: 4–5 литров слабого пива в день, тетрациклин в костях нубийцев, миф о Сехмет и красном пиве, праздник опьянения.

B10 11:47–13:52 • Химия дружбы

Тема блока: Why alcohol feels good: the chemistry of friendship

Основные смыслы: Алкоголь как «социальный клей» и его цена.

Краткое содержание: Дофамин и эндорфины, бонд вместо груминга, почему хочется в туалет, ацетальдегид и похмелье, древние «лекарства» (яйца совы, капуста), ген покраснения.

B11 13:52–14:54 • У каждого народа свой напиток

Тема блока: Every culture found its own drink

Основные смыслы: Независимые изобретения по всему миру.

Краткое содержание: Чича из пережёванной кукурузы, японское «жёванное» саке, пульке и 400 пьяных кроликов ацтеков, торговое пиво Африки.

B12 14:54–16:11 • Греки и римляне

Тема блока: Greeks and Romans: watered wine and drinking games

Основные смыслы: Культура питья и её пределы.

Краткое содержание: Вино с водой, симпосий, котабос — древний бир-понг, «правило трёх чаш» и мебель на десятой, римская поска, запрет вакханалий в 186 г. до н.э.

B13 16:11–18:17 • Средневековье: миф о грязной воде

Тема блока: The Middle Ages: the "dirty water" myth

Основные смыслы: Разрушение популярного мифа + неожиданная связь с ведьмами.

Краткое содержание: Воду пили, «малое пиво» как калории, монастырские пивоварни, пивоварки-alewives и образ ведьмы, медовуха и рога викингов, Вальхалла с козой, миф о звоне бокалов.

B14 18:17–19:34 • Тёмная сторона

Тема блока: The dark side: ancient warnings

Основные смыслы: Каждая культура открыла и опасность.

Краткое содержание: Египетский учитель ругает студента, «пахнущего пивом», строгие ацтеки, падение Шан, легенда о Йи Ди.

B15 19:34–21:04 • Поворот: пиво построило цивилизацию?

Тема блока: The twist: did beer build civilization?

Основные смыслы: Земледелие могло начаться ради пива, а биология не успела за крепким алкоголем.

Краткое содержание: Спор 1950-х «хлеб или пиво», пиршества и союзы, эволюционное несоответствие: мы ведём себя как обезьяна с гнилым фруктом в мире водки.

B16 21:04–21:55 • Финал: первый тост

Тема блока: Ending: the first toast

Основные смыслы: Кольцо к пещере и общий смысл — быть ближе друг к другу.

Краткое содержание: Люди у огня передают чашу; этот жест повторяется по всему миру. «Помните о пьяной обезьяне. И выпейте воды».

4. Полный сценарий с таймкодами (английский, для озвучки)

Таймкоды взяты из готовой озвучки (voiceover/voiceover.mp3). Каждая строка = одна картинка (кадр); номер в скобках совпадает с номером строки в image_prompts.txt.

B01 • 0:00 • Hook: the bubbling stone bowl

[0:00] It's thirteen thousand years ago.

[0:02] You live in a cave on a hillside in what is now Israel.

[0:06] Your people don't farm yet.

[0:08] They collect wild wheat and barley by hand, and grind it in stone bowls carved right into the floor of the cave.

[0:16] One day you soak some grain in water, and then you forget about it.

[0:20] For a week.

[0:21] When you come back, the bowl is bubbling.

[0:24] It smells sour.

[0:25] It looks disgusting.

[0:27] And you're hungry, so you drink it anyway.

[0:29] A few minutes later, something strange happens.

[0:33] Your face feels warm.

[0:35] Your worries feel smaller.

[0:36] And suddenly your annoying cousin is the funniest person you've ever met.

[0:41] Congratulations.

[0:43] You just got drunk.

[0:45] And here's the thing.

[0:46] You are not the first.

[0:48] Not even close.

B02 • 0:50 • Thesis: older than writing, cities and farming

[0:50] The story of alcohol is one of the weirdest stories in all of human history.

[0:55] Because humans didn't really invent alcohol.

[0:58] We inherited a taste for it.

[1:00] From apes.

[1:01] Ten million years ago.

[1:03] Alcohol is older than writing.

[1:06] Older than cities.

[1:07] Older than farming.

[1:09] And some scientists think it might be one of the reasons humans started farming at all.

[1:14] So in this video we're going to answer three questions.

[1:18] Why do humans love alcohol in the first place?

[1:21] When did we start making it on purpose?

[1:24] And did beer accidentally build civilization?

[1:27] Stick around for that last one, because the answer is stranger than you'd expect.

B03 • 1:33 • The drunken monkey

[1:33] To understand alcohol, we have to start in the jungle.

[1:37] Millions of years before humans, our ape ancestors lived in trees and ate a lot of fruit.

[1:44] And fruit has a secret.

[1:45] When it gets very ripe and falls to the ground, tiny wild yeasts start eating its sugar.

[1:52] And as they eat, they make alcohol.

[1:54] So the forest floor was basically full of tiny, natural, low-strength drinks.

[2:00] Now here's the important part.

[2:02] Around ten million years ago, our ancestors got a tiny genetic mutation.

[2:08] It changed an enzyme called ADH4, and made it about forty times better at breaking down alcohol.

[2:15] And it happened right around the time our ancestors started spending more time on the ground.

[2:21] Eating fallen fruit.

[2:23] Fermented fruit.

[2:25] Scientists call this idea the drunken monkey hypothesis.

[2:29] The idea is simple.

[2:31] If you could eat rotten fruit without getting sick, you had more food than everyone else.

[2:37] And the smell of alcohol itself could lead you straight to the ripest fruit in the forest.

[2:42] So the love of alcohol may be older than our species.

[2:46] And we're not the only ones.

[2:48] In Guinea, scientists watched wild chimpanzees climb palm trees and drink fermented palm sap using crushed leaves like sponges.

[2:58] Some of them drank enough to look pretty drunk.

[3:01] Fruit flies are drawn to the smell of alcohol too.

[3:04] And in one experiment, male fruit flies that got rejected by females chose alcohol-spiked food more often than flies that had a successful date.

[3:15] Heartbreak and a drink.

[3:17] Apparently that's older than humanity too.

[3:20] And you might have heard the story about elephants getting drunk on fallen marula fruit in Africa.

[3:26] Sadly, scientists calculated that an elephant would need to eat a huge amount of perfectly fermented fruit to feel anything at all.

[3:35] The drunk elephant is mostly a myth.

[3:38] And in Malaysia there's a tiny animal called the pen-tailed treeshrew that drinks naturally fermented palm nectar every single night and somehow never seems to get drunk.

[3:50] The animal kingdom has a lightweight problem.

[3:53] And a champion.

B04 • 3:55 • Beer before bread: Raqefet Cave

[3:55] So our bodies were ready for alcohol long before we made it.

[3:59] But when did humans start brewing on purpose?

[4:02] For a long time the answer was: after farming.

[4:05] First people grew grain, then they baked bread, and then eventually somebody made beer.

[4:11] Makes sense, right?

[4:13] Well, in 2018, scientists studied stone mortars in a place called Raqefet Cave in Israel.

[4:20] It was used by a people called the Natufians about thirteen thousand years ago.

[4:25] And inside those stone mortars, they found microscopic traces of starch that looked like it had been malted, mashed, and fermented.

[4:35] In other words, these people may have been making beer thousands of years before anyone was farming.

[4:42] Beer, possibly, before bread.

[4:44] Some researchers still argue about this, but here's what makes it even more interesting.

[4:50] Raqefet Cave was a burial site.

[4:52] The dead were buried on beds of flowers.

[4:55] So the first beer we know about may have been made for a funeral.

[4:59] A feast to say goodbye.

[5:01] Before alcohol was a party, it may have been a ritual.

B05 • 5:05 • Göbekli Tepe: the world's first party temple?

[5:05] And that brings us to one of the strangest places on Earth.

[5:09] Göbekli Tepe, in southern Turkey.

[5:12] It's around eleven and a half thousand years old.

[5:15] Older than Stonehenge by about six thousand years.

[5:18] And it was built by hunter-gatherers.

[5:21] People with no metal tools, no wheels, no writing.

[5:24] Moving stone pillars that weigh as much as ten tons.

[5:28] The pillars are covered in carvings of foxes, boars, snakes and vultures.

[5:33] And at some point, people deliberately buried parts of the site.

[5:37] Why? Nobody knows.

[5:39] Now think about that.

[5:41] Hundreds of people working together for months.

[5:44] You need to feed them.

[5:45] And you need to convince them to show up.

[5:48] Archaeologists found huge amounts of animal bones there, signs of enormous feasts.

[5:54] They also found giant stone basins that could hold up to a couple hundred liters.

[6:00] Some researchers think those basins may have been used to brew something like beer.

[6:05] That idea is still debated.

[6:08] But it would make a lot of sense.

[6:10] Because if you want hundreds of strangers to work together, there are few better ways than food, music, and a giant tub of beer.

B06 • 6:19 • China: the oldest drink we can actually prove

[6:19] Meanwhile, on the other side of the world, something similar was happening in China.

[6:24] In a Stone Age village called Jiahu, people made pottery jars around nine thousand years ago.

[6:31] And when scientists analyzed the residue inside those jars, they found the chemical fingerprint of a fermented drink made from rice, honey, and fruit, probably hawthorn or wild grapes.

[6:45] It's one of the oldest alcoholic drinks that has been chemically confirmed anywhere in the world.

[6:51] And in the same village, archaeologists found flutes carved from the wing bones of cranes.

[6:57] Some of them can still be played today.

[7:00] So nine thousand years ago, in this one village, there were drinks and there was music.

[7:06] Sounds like a party.

[7:07] And yes, a modern brewery actually recreated the recipe and sold it in stores.

[7:13] Nine thousand years later, you can taste the Stone Age.

B07 • 7:18 • Wine: grapes, jars and pine resin

[7:18] And then came wine.

[7:19] In the country of Georgia, archaeologists found large clay jars about eight thousand years old, with traces of grape wine inside.

[7:29] Some of the jars were decorated with grape clusters.

[7:33] In Iran, jars from about seven thousand years ago held wine mixed with tree resin, which helped keep it from turning into vinegar.

[7:42] And in a cave in Armenia, archaeologists found what looks like an ancient winery.

[7:48] A shallow basin for stomping grapes with your feet, with a channel draining the juice into a buried jar.

[7:55] About six thousand years old.

[7:57] Thousands of years later, in the tomb of Tutankhamun, archaeologists found wine jars labeled with the year, the vineyard, and even the name of the chief winemaker.

[8:09] The boy king was buried with vintage wine.

[8:12] So the next time somebody tells you that wine is a sophisticated drink, remember that it started with a guy in a cave stomping fruit with his feet.

B08 • 8:22 • Sumer: paid in beer, drinking through straws

[8:22] Then cities appeared.

[8:24] And in Mesopotamia, beer became part of everyday life.

[8:28] In ancient Sumer, beer was food, medicine, religion, and money.

[8:33] Workers were often paid partly in rations of beer and bread.

[8:37] Clay tablets record daily beer rations, like an ancient payroll.

[8:42] But Sumerian beer didn't look like the beer you know.

[8:45] It was thick, cloudy, and full of floating grain husks.

[8:49] So how did they drink it?

[8:51] With straws.

[8:52] Long straws, to reach past the gunk floating on top.

[8:56] Sumerian art shows people sitting around a big jar, all drinking from it together through long straws.

[9:03] And in the royal tombs of Ur, archaeologists found a drinking straw made of gold and lapis lazuli.

[9:11] The world's first luxury straw.

[9:13] In the Epic of Gilgamesh, one of the oldest stories ever written, there's a wild man named Enkidu who grew up with animals.

[9:22] To become a real human, he is given bread and beer.

[9:26] He drinks seven jugs, feels amazing, washes himself, and becomes civilized.

[9:31] For the Sumerians, bread and beer were literally what made you human.

[9:36] The Sumerians even had a goddess of beer, Ninkasi.

[9:39] And a hymn to her, written almost four thousand years ago, describes how to make beer step by step.

[9:46] It's basically a song that doubles as a recipe.

[9:50] And Babylon's famous law code of Hammurabi included rules about taverns.

[9:55] One law said a tavern keeper who cheated her customers on the price of drinks could be thrown into the water.

[10:03] Four thousand years ago, they already had consumer protection for beer.

B09 • 10:08 • Egypt: beer for the pyramid builders and a drunk goddess

[10:08] And then there's Egypt.

[10:10] The people who built the pyramids weren't slaves, as the old movies suggest.

[10:15] Most were organized, paid workers.

[10:18] And their pay included bread and beer.

[10:20] Estimates suggest a worker could get around four or five liters of beer a day.

[10:25] That sounds insane, but this beer was usually weak, thick, and full of calories.

[10:31] It was less like a party drink and more like liquid bread.

[10:35] And here's a bizarre detail.

[10:37] Scientists studying ancient Nubian bones from around two thousand years ago, found traces of tetracycline in them.

[10:45] That's an antibiotic.

[10:47] The likely source?

[10:49] Beer brewed from grain contaminated with bacteria that naturally produce the antibiotic.

[10:55] Ancient people may have been drinking medicine without having any idea.

[11:00] The pyramids, in a way, were powered by beer.

[11:03] And the Egyptians even had a myth about how beer saved humanity.

[11:08] In the story, the sun god Ra got angry at humans.

[11:11] So he sent the goddess Sekhmet to punish them.

[11:14] But Sekhmet was a lioness goddess, and once she started, she wouldn't stop.

[11:19] She was going to wipe out everyone.

[11:22] So Ra came up with a plan.

[11:24] He had thousands of jars of beer dyed red, so it looked like blood, and poured it all over the fields.

[11:31] Sekhmet saw it, thought it was blood, drank all of it, got completely drunk, and fell asleep.

[11:37] Humanity was saved.

[11:39] By a hangover.

[11:40] And the Egyptians celebrated this story with an actual festival of drunkenness.

B10 • 11:47 • Why alcohol feels good: the chemistry of friendship

[11:47] But why did all these cultures, completely separately, fall in love with alcohol?

[11:52] Let's talk about what it actually does to your brain.

[11:55] Alcohol slows down parts of your brain that normally keep you careful and anxious.

[12:01] It also helps release dopamine and endorphins, the brain's own feel-good chemicals.

[12:07] That's why people get louder, friendlier, and suddenly want to tell you that they love you.

[12:13] And some scientists think this is the real secret of alcohol.

[12:18] Not the taste.

[12:19] Bonding.

[12:20] Humans live in bigger groups than almost any other primate.

[12:24] And keeping a big group together is hard.

[12:27] Apes bond by grooming each other, but you can only groom a few friends at a time.

[12:32] Alcohol, shared around a fire, may have worked like a shortcut to that same warm, connected feeling.

[12:39] A kind of liquid social glue.

[12:41] And alcohol has another famous side effect.

[12:45] It blocks a hormone that tells your kidneys to hold on to water.

[12:49] Which is why, after a few drinks, you spend half the night looking for a bathroom.

[12:54] Of course, it comes with a price.

[12:56] When your liver breaks down alcohol, it makes a toxic chemical called acetaldehyde.

[13:02] That, plus dehydration and bad sleep, is a big part of what you feel the next morning.

[13:09] And ancient people tried some truly terrible hangover cures.

[13:13] The Roman writer Pliny the Elder recommended raw owl eggs.

[13:17] An Assyrian remedy supposedly involved ground-up bird beaks and myrrh.

[13:22] And the ancient Greeks swore by cabbage.

[13:25] None of these work.

[13:26] Please don't eat an owl egg.

[13:28] And some people get the bill much faster.

[13:31] Hundreds of millions of people, especially in East Asia, carry a gene variant that makes their face turn red after just a little alcohol.

[13:41] Their bodies clear that toxic chemical more slowly.

[13:44] Some scientists think this variant spread around the same time as early rice farming, though nobody knows for sure.

B11 • 13:52 • Every culture found its own drink

[13:52] And here's what really shows how deep this goes.

[13:55] Almost everywhere humans settled, they found their own way to make a drink.

[14:00] In the Andes of South America, people made a corn beer called chicha.

[14:05] And traditionally, one way to start the fermentation was to chew the corn and spit it into the pot.

[14:11] Enzymes in human saliva turn the starch into sugar so the yeast can turn it into alcohol.

[14:18] Spit beer.

[14:19] And Japan had its own version, an old rice drink made by chewing rice.

[14:25] In Mexico, people fermented the sap of the agave plant into a milky drink called pulque.

[14:31] The Aztecs had a whole family of pulque gods who were rabbits.

[14:35] Four hundred drunk rabbits, one for every different way of being drunk.

[14:40] And across Africa, people brewed beer from sorghum and millet that was shared at weddings, funerals and work parties.

[14:48] Completely different continents.

[14:50] Completely different plants.

[14:52] The same idea.

B12 • 14:54 • Greeks and Romans: watered wine and drinking games

[14:54] Now let's jump to ancient Greece.

[14:56] The Greeks loved wine, but they had a rule.

[14:59] You always mixed it with water.

[15:01] Drinking wine straight was considered something only barbarians did.

[15:06] And the Greeks turned drinking into an event called the symposium.

[15:10] Men lay on couches, drank, recited poetry, argued about philosophy, and played a game called kottabos.

[15:18] You flicked the last drops of wine from your cup at a target across the room.

[15:23] Basically ancient beer pong.

[15:25] One Greek playwright even described the perfect number of drinks.

[15:30] The first bowl is for health.

[15:32] The second for love and pleasure.

[15:34] The third for sleep.

[15:36] After that, he said, things start to go wrong.

[15:39] By the tenth bowl, you get madness, and people start throwing furniture.

[15:44] Ancient wisdom that every party still ignores.

[15:47] The Romans took wine everywhere.

[15:49] Roman soldiers drank posca, a sour mix of vinegar and water.

[15:54] And in 186 BC, the Roman Senate cracked down hard on the secret festivals of the wine god Bacchus.

[16:02] They were so worried about them that thousands of people were reportedly punished.

[16:07] Even the Romans thought some parties went too far.

B13 • 16:11 • The Middle Ages: the "dirty water" myth

[16:11] And now, a myth you've probably heard.

[16:14] People in the Middle Ages drank beer all day because the water was too dirty to drink.

[16:20] Right?

[16:21] Not really.

[16:22] Historians say this is mostly a myth.

[16:25] Medieval people drank plenty of water.

[16:28] They had wells, springs, and rules to keep water clean.

[16:32] But beer was still everywhere, partly because it was food.

[16:36] A weak beer called small beer was drunk by almost everyone, because it gave you calories for long days of work in the fields.

[16:44] Monasteries became some of the best brewers in Europe.

[16:48] Some monastery breweries are still running today.

[16:51] And for a long time, brewing was mostly women's work.

[16:55] In medieval England, women called alewives brewed ale at home and sold it.

[17:00] Some historians have pointed out a strange coincidence.

[17:04] Some alewives wore tall hats so they stood out in crowded markets.

[17:08] They brewed in big cauldrons.

[17:11] They hung a broom outside the door to show ale was for sale.

[17:14] And many kept cats to protect the grain from mice.

[17:18] Pointy hat.

[17:19] Cauldron.

[17:20] Broom.

[17:21] Cat.

[17:22] Sound familiar?

[17:23] Whether alewives really inspired the witch image is debated, but it's a fascinating idea.

[17:30] And the Vikings drank mead, a wine made from honey, often from drinking horns.

[17:35] In Norse myth, fallen warriors in Valhalla drank mead that never ran out, flowing from the udders of a magical goat.

[17:44] The Viking idea of paradise was an all-you-can-drink buffet supplied by a goat.

[17:50] Which have one small design problem.

[17:52] You can't put them down until they're empty.

[17:55] And while we're busting myths, you've probably heard that people clink glasses to splash drinks into each other's cups and prove nothing was poisoned.

[18:04] There's basically no historical evidence for that.

[18:08] The truth is probably simpler.

[18:10] Clinking just feels good.

[18:12] It adds a sound to the moment, and makes the toast feel shared.

B14 • 18:17 • The dark side: ancient warnings

[18:17] But it wasn't all fun.

[18:18] Ancient people knew alcohol could also destroy lives.

[18:23] An Egyptian teacher wrote a letter scolding a student who was skipping his lessons, wandering from street to street, smelling of beer.

[18:32] More than three thousand years later, that letter could have been written by any parent today.

[18:37] In China, there's an old legend about a woman named Yi Di who brewed a wonderful drink for an ancient king.

[18:45] He tasted it, loved it, and then banished her.

[18:48] Because, he said, one day this drink would cost someone their kingdom.

[18:52] And the Aztecs, despite their four hundred drunk rabbit gods, were famously strict.

[18:58] Public drunkenness could be severely punished, while elders were often allowed to drink more freely.

[19:05] Getting old finally had a perk.

[19:07] And in ancient China, the Shang kings were famous for their bronze wine vessels and huge drinking parties.

[19:14] When the Shang dynasty fell, the new rulers blamed it partly on too much drinking, and issued one of the oldest known warnings against heavy drinking.

[19:24] Every culture that discovered alcohol also discovered the same problem.

[19:29] The thing that brings people together can also tear them apart.

B15 • 19:34 • The twist: did beer build civilization?

[19:34] But here's the part I really want to leave you with.

[19:38] In the 1950s, two scientists started a famous argument.

[19:42] Why did humans start farming?

[19:44] The normal answer was bread.

[19:46] Food security.

[19:48] But some researchers proposed a crazier idea.

[19:51] What if people started growing grain not just for bread, but for beer?

[19:56] Think about it.

[19:57] Farming was hard.

[19:59] Early farmers were often shorter and less healthy than hunter-gatherers.

[20:04] So why would anyone choose that life?

[20:07] One possible answer is feasts.

[20:09] Gatherings, rituals, celebrations where people built alliances and shared fermented drinks.

[20:15] And to make enough beer for those feasts, you need a lot of grain.

[20:20] A reliable supply.

[20:22] A field.

[20:23] This "beer before bread" idea is still debated, and it probably wasn't the only reason.

[20:29] But it's a wild thought.

[20:31] The first farmers may have been, at least in part, working for a drink.

[20:36] And there's one more twist.

[20:38] Our bodies evolved for fruit that was maybe one or two percent alcohol.

[20:43] Distilled spirits like vodka and whiskey only became common in the last few hundred years.

[20:50] That's a blink of an eye in evolution.

[20:52] We are walking around with a jungle ape's love of rotten fruit in a world full of drinks that are twenty or thirty times stronger.

[21:01] Our biology never got the update.

B16 • 21:04 • Ending: the first toast

[21:04] So let's go back to that cave.

[21:06] Thirteen thousand years ago.

[21:09] A group of people sitting around a fire, passing around a stone bowl of sour, lumpy beer.

[21:15] Maybe they were saying goodbye to someone they loved.

[21:18] Maybe they were celebrating a good hunt.

[21:21] Maybe they were just happy to be alive.

[21:24] But they were doing something that humans have done in every corner of the world ever since.

[21:29] Sitting together.

[21:30] Sharing a drink.

[21:32] Feeling, just for a moment, a little closer to each other.

[21:36] So the next time you see people raise their glasses, remember that it's not just a party trick.

[21:42] It's a ten million year old story that started with a monkey and a piece of rotten fruit and ended up shaping who we are.

[21:50] Just remember the drunk monkey.

[21:52] And maybe drink some water too.

5. Факты, которые стоит перепроверить перед публикацией

- ADH4 и «пьяная обезьяна»: Carrigan et al., PNAS 2015 (~10 млн лет, ~40х); Dudley (гипотеза).
- Шимпанзе Боссу (Гвинея) и пальмовое вино: Hockings et al., 2015. Тупайя: Wiens et al., 2008. Мушки: Shohat-Ophir et al., Science 2012. Слоны и марула: Morris et al., 2006.
- Ракефет: Liu et al., 2018 (13 000 лет) — интерпретация спорная. Гёбекли-Тепе: Dietrich et al., 2012 — гипотеза о брожении спорная.
- Цзяху: McGovern et al., PNAS 2004; флейты — Zhang et al., 1999. Грузия: McGovern et al., 2017. Хаджи-Фируз; Арени-1 (~6 100 лет).
- Тутанхамон: этикетки на 26 винных кувшинах с годом, виноградником и виноделом.
- Соломинка Пуаби из Ура (золото и лазурит); гимн Нинкаси (~1800 до н.э.); закон Хаммурапи §108; Энкиду и 7 кувшинов.
- Пайки строителей пирамид — оценочные (4–5 л); тетрациклин в нубийских костях: Bassett 1980, Nelson/Armélagos 2010.
- Эвбул о «трёх чашах»; котабос; поска; вакханалии 186 до н.э. (Ливий, ~7 000 вовлечённых).
- Миф о «грязной воде» — позиция ряда историков; связь alewives и образа ведьмы — гипотеза, в тексте названа спорной.
- Гипотеза «пиво раньше хлеба» (Braidwood/Sauer, 1953) — в тексте прямо указано, что это спорно.

6. Производство

- Озвучка: voiceover/voiceover.mp3 (Kokoro TTS, голос am_michael, скорость 0.93).
- Промпты: image_prompts.txt — по одному на кадр, в порядке сценария.
- Готовое видео: final_video_1080p.mp4 — кадры нарисованы программно (tools/paint_frames.py); после генерации картинок нейросетью — пересобрать tools/montage.py.
